Is this water or tailings from a tailings dam blowout? Makes a big difference in sampling parameters along with what kind of mine it came from. If the slug is coming down through Aztec it should be in the Animas River and will meet the San Juan below there. This area has alot of alfalfa fields. Several river miles fro Navajo, but if it is coming down the Animas it will go through one of the Ute reservations just north of the NM line.

Susan

I just spoke to Robert Sherman with Weston in the Grants office. He had spoke to David Crow concerning the mine water release. Robert has sent two people to Farmington tonight. Larry Howard and Tori Gomez They are taking sample bottles with them.
